

INSTALL A RAIN BARREL

Rain barrels capture water from a roof and hold it for later use such as in gardens or on indoor plants. Collecting roof runoff in rain barrels reduces the amount of water that flows from your property as storm runoff, which may cause wet basements. Plus, storm runoff picks up soil, fertilizer, oil, pesticides, and other contaminants from hard surfaces and landscapes.

A lot of energy is used in getting drinking water to our taps. A rain barrel is one way to reduce the amount of it that we use to water the plants in our garden.
